

SUMMARY

My name is Moein, and I am a passionate Java programmer with several years of experience in the field. I have a deep love for coding and enjoy the challenges that come with software development. Over the years, I have honed my skills in Java, developing robust applications and solving complex problems. My dedication to learning and staying updated with the latest technologies makes me a valuable asset to any development team.

SKILLS

Java SE	● ● ● ● ●	Backend Web Developer	● ● ● ● ●

Senior Developer at KeyWordChi, actively involved in this project from the beginning, developed using C# on the .NET Core 3.1 platform.

PROJECTS

Keywordchi

Software engineer Jul 2020 - Present

KeywordChi is a tool or service that helps users find suitable keywords for their content. It is typically used by SEO specialists (Search Engine Optimization) and content creators to increase website traffic and improve rankings in search engine results.

Some features and benefits of KeywordChi may include:

1. **Keyword Research:** KeywordChi helps users identify relevant and high-search keywords.
2. **Competitor Analysis:** The tool can show users which keywords their competitors are using and how they are ranking.
3. **Content Suggestions:** KeywordChi might offer recommendations to improve website content based on keywords.
4. **Performance Analysis:** The tool can show users which keywords are driving the most traffic to their website.

If the KeywordChi you are referring to is a specific tool or service with unique features or applications, please provide more details so I can give more

accurate information.
